LONDON: NEW DESIGN THE STORE OF A NEW LEVEL

**london**

Thanks to the available features of reach-in refrigerated display bonnets LONDON, your retail site will become unique and effective.

The display bonnets are distinguished by their modern stylish design, due to the large curved glass and LED illumination offering better exposition to food products. The combination of forms and dimensional models offered for refrigerated bonnets LONDON together with the accessories, options, and temperature conditions provide a wide range of options to create modern shopping layouts.

The technical perfection of the equipment, the use of energy efficient and environmentally friendly materials, and minimal maintenance make the line of display bonnets LONDON the most effective tool for organizing retail.

## Distinctive features:

- Highly transparent sliding glass windows with low heat conductance.
- Best-in-class visibility of products due to the use of curved glass.
- The availability of transformable multi-level wireframes and baskets for effective displaying of products.
- Single or double LED row for interior space.
- The possibility of end elements for assembling refrigerated islands.
- Single and two level island-type and next-to-wall shelved extension structures to display associated products with an option of installing LED illumination for the shelves.
- The special design of the internal spacing of the reach-in refrigerated bonnets reduces ice formation and does not require frequent defrosting.
- Auto defrost is done using modern-day management by CPU.
- The use of environmentally friendly and energy efficient Freon R290 provides reduction in power consumption by 20%.
- Connectivity to remote monitoring and temperature control system.

Energy  
saving

Energy efficient LED illumination provides excellent exposition background and effectively underlines exceptional quality of products. As an option, doublesided LED illumination can be installed in the space, giving the maximum lighting to the products.

Plastic  
bumper

The protecting plastic bumper with a color insert signifies its individuality and perfected esthetics, and provides the necessary protection against impacts by shopping carts.

Smooth  
lines

The perfectly smooth contours of the glass and decorating plastic elements highlight this equipment as of the premium class, providing maximum visibility to displayed products.

Kick  
plate

The optionally available kick plate provides space minimization between the body of the display cabinet and the floor, hiding its feet.

Restrictors

Transparent product stoppers against roll-down from the shelves of the extension structure do not create a psychological barrier between the customer and the product.

Transform the row

The ability to transform the row of grid-based shelves and baskets adds functional flexibility to the refrigerated space, which not only offers the reaching accessibility for selling but also allows to store goods at the lower level.

Glass elements

The stationary glass elements of the end side offer decorating pattern which points out its individuality and design perfection.

Shelf

The single-sided (next-to-wall) and double-sided (island type) shelved extension structure with LED illumination creates further options for displaying products.

Perfect  
installation

The option to adjust the height of the supporting legs ensures perfect installation of a line or island of refrigerated displays cabinets even in store areas based on a complete architecture.

Branding

Manifold possibilities for bonnet bin branding allow the food manufacturers to single out the equipment in stores.
